latrach.moez@gmail.com

SENIOR JAVA / ANGULAR CONSULTANT

Senior Java / Angular developer with 11+ years of experience in banking (BNP Paribas, HSBC) and the public sector. Specialized in legacy system modernization and microservices (Quarkus, Spring Boot) in Agile teams, and now extending into generative AI through an end-to-end RAG project.

CORE SKILLS

Back-End	**Java** (6, 7, 8, 11, 17, 21) **Frameworks**: **Spring** (**Boot**, Data, Security, **MVC**, Batch), **Quarkus** **Orchestration & BPM**: **Kogito** (BPMN 2.0) **Messaging**: **Kafka** (Kogito event integration in Quarkus) Reactive Programming: **Mutiny (Quarkus)** – internal event-driven processing Persistence: **Hibernate/JPA**, **MyBatis**
Front-End	**Angular** (v8 to v14), RxJS, NgRx, AG Grid HTML5, CSS3, **TypeScript**, **JavaScript** (ES6+) UI Frameworks: **Bootstrap**, **Angular Material**, PrimeFaces, **jQuery**
Generative AI	**RAG** pipeline (ingestion, embeddings, vector search) AI framework: **LangChain4j** LLMs: **Ollama (Mistral)**, **Azure OpenAI** Vector database: **PostgreSQL / pgvector** Document extraction: **PDFBox**, **Apache POI**
Databases	**PostgreSQL**, **Oracle**, **MySQL**
DevOps & Integration	CI/CD: **Jenkins**, **GitLab CI** Containerization & orchestration**: Docker, Kubernetes** (ConfigMaps, deployments)

	Security & secrets management: **Vault** Code quality & static analysis**: SonarQube** Database migration**: Liquibase**
Testing & Validation	**JUnit**, **Mockito**, **Selenium**, **Jasmine**, **Karma**, **Cucumber**, Extent Reports **Postman** (API testing and automation) Testing strategies: **TDD**, **BDD**
Tools & Methodologies	Git, SVN, **Maven** Agile methodologies (**Scrum**, Kanban) **UML**, Design Patterns

EDUCATION

2014	Master's-level Engineering Degree in Software Engineering
2010	Bachelor's degree in IT Management – Web Services specialization

LANGUAGES

French	Fluent
Arabic	Native
English	Professional working proficiency
Italian	Professional working proficiency

PERSONAL PROJECT – GENERATIVE AI

Since March 2026 **Personal Project**

RAG Document Assistant – end-to-end design and development

Context: Personal project developed outside any client engagement to specialize in applied generative AI: an assistant that answers questions from PDF and Word documents.

Responsibilities:

- Design of a complete RAG pipeline: document ingestion, chunking, embeddings, filtered vector search, and LLM answer generation
- Back-end development with Quarkus and LangChain4j, using a local LLM via Ollama (Mistral) or Azure OpenAI
- Vector indexing with PostgreSQL/pgvector; text extraction from PDF (PDFBox) and Word (Apache POI) documents
- Answer quality work: diagnosis of retrieval failures, rank and score traceability for each chunk, end-to-end pipeline observability
- Data confidentiality by design: Quarkus profiles separating a local mode (Ollama, private documents) from a cloud mode (Azure OpenAI, demo data only)
- Angular front-end: document upload and multi-document chat interface

Technical Environment: Java 21 (Quarkus), LangChain4j, Ollama (Mistral), Azure OpenAI, PostgreSQL, pgvector, PDFBox, Apache POI, Angular.

PROFESSIONAL EXPERIENCE

March 2023 – March 2026 **BNP Paribas**

Java / Angular / DevOps Consultant

Project: Strategic migration of a legacy Mainframe system to a cloud-native microservices architecture based on Quarkus, Angular, and Kogito, aiming to modernize the information system, reduce technical debt, and improve scalability.

Context: The bank aimed to transform a critical legacy system into a modern, flexible, event-driven solution capable of handling high volumes and integrating into a DevOps approach.

Team: 1 Technical Architect, 5 Product Owners, 1 Scrum Master, 10 Java/Angular developers, 2 DevOps engineers, 8 Teradata engineers, 5 Business Analysts, 1 Technical Lead.

Methodology: Agile Scrum – 3-week sprints (Daily, Sprint Planning, Demo, Retrospective)

Responsibilities:

- Development of REST APIs (Quarkus) and responsive Angular interfaces
- Design of the persistence layer using MyBatis (optimized SQL queries)
- Business process orchestration with Kogito (BPMN): file generation, storage on Cloud Object Storage (COS), and file delivery via CFT
- Analysis of Kogito limitations regarding parallelism → implementation of an event-driven decoupling mechanism
- Use of Mutiny (Quarkus) for reactive internal processing (e.g., triggering MyBatis insert operations on custom events)
- Refactoring of server-side AG Grid to eliminate timeouts and improve performance
- Development of full CSV exports on the back end to bypass server-side pagination
- Collaboration with DevOps teams:
- Kubernetes ConfigMaps adjustments (CPU/memory optimization)
- Secrets and role management with Vault
- Use of Liquibase for database migration scripts in an industrialized environment
- Replaced synchronous HTTP calls with Kafka messaging for Kogito event exchange (Quarkus)
- Writing unit tests with Mockito (coverage ≥ 80%)

Results:

- Successful migration of several legacy modules to cloud-native microservices
- Improved scalability and system robustness through event-driven architecture (Kogito + Kafka + Mutiny)
- Performance optimization for both UI (AG Grid) and back end (MyBatis)
- More secure and reliable deployments through Vault, Kubernetes, and Liquibase
- Reduction of batch-related incidents thanks to reactive orchestration

Technical Environment: Java 21 (Quarkus), Angular, MyBatis, Kogito (BPMN), Kafka, Mutiny (Quarkus), Liquibase, AG Grid, Shell Script, Kubernetes (ConfigMaps), Vault, Mockito, Git, CI/CD, Cloud Object Storage (COS).

January 2021 – February 2023 **Ministry of Transport**

Java / Angular / DevOps Consultant

Project: Development of a dashboard for inspection tracking and evolution of business modules with CI/CD and quality best practices.

Context: Modernization and maintenance of the national CAIRN application (National Register of Ski Lift Installations), used for managing and monitoring mechanical lift equipment.

Team: 1 PO, 1 Scrum Master, 5 full-stack developers + architects & business teams.

Methodology: Agile Scrum – 2-week sprints (Daily, Sprint Planning, Demo, Retrospective)

Responsibilities:

- Setup of the technical environment
- Development of a dashboard aggregating inspection data:
  - API design (REST)
  - Data access with Spring Data / JPA / Hibernate
  - Angular pages and REST service consumption
- Unit tests: JUnit, Mockito
- Code review and PR validation
- Participation in Agile ceremonies
- Technical guidance and best-practice recommendations
- Integration with SonarQube
- Knowledge transfer
- Integration tests
- Bug fixes and ticket handling

Results:

- Deployment of a centralized tool used by hundreds of operators
- Reduced bug resolution time through CI/CD automation

Technical Environment: Java 8, Spring Boot, Spring Data, Spring Security, REST API, Postman, Angular, PostgreSQL, Hibernate, Maven, Git, Jenkins, Docker, Kubernetes, SonarQube.

September 2018 – December 2020 **Interministerial IT Center for HR Services**

Java / Angular Consultant

Project 1: GAUDDI Application

Context: Business HR application for administrative and HR process management (leave, planning, evaluations, staffing requests).

Team: 5 developers, 1 PO, 1 Scrum Master.

Methodology: Agile Scrum – Daily, Sprint Planning, Sprint Review, Retrospective.

Responsibilities:

- Corrective and adaptive maintenance
- Code optimization (Clean Code, SonarQube)
- Development of new features across modules
- Maintenance of the automatic import web service
- Development and maintenance of unit and integration tests
- Bug fixing (Mantis)
- Participation in Agile ceremonies

Results:

- Improved software quality (cleaner code, fewer defects)
- Increased productivity for HR users

Technical Environment: Java 8, Spring, REST, JUnit, Mockito, SonarQube, Angular, HTML, CSS, jQuery, HR Access, Tomcat, Maven, Mantis.

Project 2: Selenium / BDD Testing Tool

Context: Development of a tool to industrialize and automate non-regression tests.

Team: 3 developers, 1 PO

Methodology: Agile Scrum – Daily, Sprint Planning, Sprint Review, Retrospective.

Responsibilities:

- Requirements analysis with business teams
- Technical architecture design
- Web service design and implementation
- Back-end development (Java/Spring Boot) and front-end (Angular/Bootstrap)
- Development of non-regression tests with Selenium
- BDD implementation with Cucumber
- Automated report generation (Extent Reports)
- Integration tests and coordination with HR teams

Results:

- 50% reduction in validation time
- Widespread adoption of BDD practices
- Improved delivery reliability

Technical Environment: Java 8, Spring Boot, REST, Angular, Bootstrap, Selenium, Cucumber, Extent Reports, JUnit, Maven, SonarQube.

August 2016 – August 2018 **HSBC**

Java Engineer

Project 1: Internal Messaging Application

Context: Development of an internal communication tool for HSBC teams.

Team: 4 developers, 1 PO

Methodology: Agile Scrum – Daily, Sprint Planning, Sprint Review, Retrospective.

Responsibilities:

- Module design and development
- Unit testing
- User support and knowledge transfer
- Technical monitoring and incident resolution

Results:

- Deployment of a reliable internal messaging system
- Reduced communication incidents

Technical Environment: Java 7, EJB, JPA, Hibernate, SOAP, XML, CXF, Oracle, WebSphere, Liferay, jQuery, Log4J, SVN, Maven, Tomcat.

Project 2: Financing Lines Management (ILF)

Context: Development of an internal application for finance line management and validation.

Team: 10 developers, 1 architect, 1 PO

Methodology: Agile Scrum – Daily, Sprint Planning, Sprint Review, Retrospective.

Responsibilities:

- Development of the financing lifecycle module (authorization, credit, insurance, guarantees)
- Technical documentation
- Unit testing
- Support and bug fixes

Results:

- Improved monitoring and validation processes
- Shorter processing times

Technical Environment: Java 7, EJB, JPA, Hibernate, SOAP, XML, CXF, Oracle, WebSphere, Liferay, jQuery, Log4J, SVN, Maven, Tomcat.

October 2014 – July 2016 **TMS (Technic Marketing Service)**

Java Full-Stack Developer

Project 1: Order Management Application

Context: Digitization of the entire order management process.

Team: 3 developers, 1 PO

Methodology: Agile Scrum – Daily, Sprint Planning, Sprint Review, Retrospective.

Responsibilities:

- Business needs analysis
- Technical specifications
- Back-end (Java EE, EJB, JPA) and front-end development (JSF, PrimeFaces)
- Unit testing

- Production deployment and functional support
- Incident resolution

Results:

- Full digitization of order workflows
- Error reduction and improved traceability

Technical Environment: Java 6, EJB, JSF, PrimeFaces, JBoss, JPA, Hibernate, JDBC, SOAP, MySQL, SVN, UML.

Project 2: Event Management Application

Context: Internal tool to manage events, spaces, schedules, and statistics.

Team: 3 developers, 1 architect, 1 Project Manager.

Methodology: Agile Scrum – Daily, Sprint Planning, Sprint Review, Retrospective.

Responsibilities:

- Functional analysis
- UI/UX design
- Back-end (Java EE, EJB, JPA) and front-end development (JSF, PrimeFaces)
- Maintenance (corrective, adaptive, perfective)
- Technical support

Results:

- Improved event and space management
- Reliable statistics for business monitoring

Technical Environment: Java 6, EJB, JSF, PrimeFaces, JBoss, JPA, Hibernate, JDBC, SOAP, MySQL, SVN, UML.
